

## مرکز تصویر برداری نصر نبوی

نام بیمار: محمد بنفشه خواه

تاریخ پذیرش: ۱۴۰۲-۰۹-۲۷

شماره پذیرش: ۱۰۸۹۷۸۵

On brain CT scan without contrast injection,

Cerebral ventricles, gyri, sulci and the cisterns are normal in appearance.

The density of the grey and white matter appears normal.

The basal ganglia, internal capsules and thalami are intact.

Sella turcica and the perisellar regions are within normal limits.

There is not any visible pathology in the brainstem and cerebellum.

Neither mass-effect nor midline shift is seen.

There is not any evidence favoring intracranial hemorrhage or infarction either.

On coronal and axial CT scan of the orbit without contrast injection;

Depressed fracture is seen in anterior wall of left frontal sinus and superior orbital wall.

The external ocular muscles are normal and symmetric.

There is not any visible intraconal pathology.

The globe itself is within normal limits.

Orbital fat is not infiltrated.
